WordPress Website Speed Checklist:

8 Ways to Significantly Increase Your Website's Load TIme

☐ - Reduce the number of plugins you use

☐ - Reduce the amount of JavaScript used on the homepage

☐ - Change your web hosting to [WP Engine](#)

☐ - Optimize images for the web, making them the exact dimension/size that they will appear on your website

☐ - Reduce the number of HTTP requests

☐ - Enable page and database caching ([WP Engine](#) makes this easy!)

☐ - Minify code (aka, code that has comments, blank space, and unnecessary characters in it)

☐ - If you have a lot of International visitors, use a CDN like [Max CDN](#)
